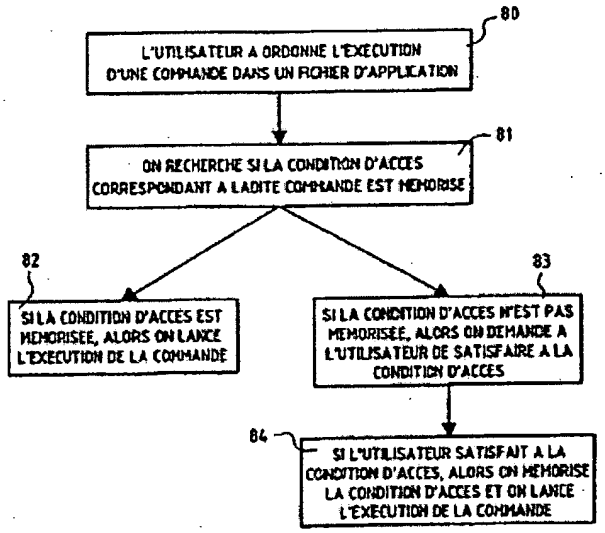
Abstract of **FR2793048**

The invention relates to a method for controlling commands in several application files, whereby an access condition corresponding to said command is associated with each command in each application file, each command in each application file is executed if a user orders the execution thereof and if the access condition corresponding to said command is stored. According to the invention, the access conditions are stored jointly for all application files.



80
L'UTILISATEUR A ORDONNE L'EXECUTION D'UNE COMMANDE DANS UN FICHIER D'APPLICATION
81
ON RECHERCHE SI LA CONDITION D'ACCES CORRESPONDANT A LADITE COMMANDE EST MEMORISE
82
SI LA CONDITION D'ACCES EST MEMORISEE, ALORS ON LANCE L'EXECUTION DE LA COMMANDE
83
SI LA CONDITION D'ACCES N'EST PAS MEMORISEE, ALORS ON DEMANDE A L'UTILISATEUR DE SATISFAIRE A LA CONDITION D'ACCES
84
SI L'UTILISATEUR SATISFAIT A LA CONDITION D'ACCES, ALORS ON MEMORISE LA CONDITION D'ACCES ET ON LANCE L'EXECUTION DE LA COMMANDE

80. THE USER ORDERED THE EXECUTION OF A COMMAND IN AN APPLICATION FILE
81. SEARCH IF THE ACCESS CONDITION CORRESPONDING TO SAID COMMAND IS STORED
82. EXECUTION OF THIS COMMAND IS LAUNCHED IF THE ACCESS CONDITION IS STORED
83. THE USER IS REQUESTED TO MEET THE ACCESS CONDITION IF THE ACCESS CONDITION IS NOT STORED
84. THE ACCESS CONDITION IS STORED AND THE EXECUTION OF THE COMMAND IS LAUNCHED IF THE USER MEETS THE ACCESS CONDITION
